Our 6 long-term commitments

2 guiding principles

#1 – Do well to do good and vice versa

- Performance
- Business
- All ESG

#2 – Bringing everyone along

- Model & Culture
- All Stakeholders

Act for a climate-positive world	by continuously investing in and developing innovative solutions that deliver immediate and lasting decarbonization in line with our Net-Zero Commitment
Be efficient with resources	by behaving responsibly and making the most of digital technology to preserve our planet
Live up to our principles of trust	by upholding ourselves and all around us to high social, governance, and ethical standards
Create equal opportunities	by ensuring all employees are uniquely valued and work in an inclusive environment to develop and contribute their best
Harness the power of all generations	by fostering learning, upskilling, and development for each generation, paving the way for the next
Empower local communities	by promoting local initiatives and enabling individuals and partners to make sustainability a reality for all

Public

Methodological note

Schneider Sustainability Impact (SSI), is Schneider Electric's continuous improvement process to deliver outstanding sustainability performance, in line with its business strategy. Progress is measured against a 2020 baseline, except for two programs measured against a 2019 baseline to mitigate COVID-19 impacts (SSI #1 Impact revenues and SSI #10 opportunities for the next generation), one program measured against a 2021 baseline (SSI #7 Level of confidence to report unethical conduct), and one program measured against a 2022 baseline (SSI #6 our strategic suppliers provide decent work to their employees).

The SSI provides, on a scoring scale of 10, an overall measure of the Group's progress on its sustainability goals. This is done by converting each KPI's performance on a 10-point scale, considering that base year performance receives a 3/10 score, and the 2025 ambition translates in a 10/10 score. For each KPI, the relevant score is obtained by linear interpolation and rounded down to the second decimal. By construction, the score of an indicator cannot exceed 10/10, and cannot be lower than 0/10. The overall score of the tool is the average of each KPI's score with equal weight, excluding the Local commitment (SSI #+1). An external auditor provides a limited assurance on the KPIs of the SSI once a year – including the review of the methodologies and processes used to consolidate the different KPIs. In 2024, the Group obtained a "reasonable" assurance for SSI #8.

Each year, the SSI performance impacts short-term incentives for the Group's executives and about 80,000 eligible employees, for 20% of the collective share.
